

Scott from all parts of Canada are smiling on the B.S. Monarchs next month on the 1934 Overseas B.S. B-Town party in a visit to their native land. There will be big festivities in the home land when they arrive.

The honesty of the British public is well known in the British Museum, which reports that it is a very rare occurrence to lose a book.

You'll like this sturdy little stove. It meets practically every cooking need in kitchens, cottages, home laundries, dairies; in fact, any place where clean, quick cooking heat is required. Carry and use it anywhere. It makes and burns its own gas from untreated motor fuel. Lights instantly with a clean, blue-gas cooking flame. Available in Maroon, Brown baked enamel or Soft Green porcelain finish. Priced surprisingly low.

HEALTH

Allergy
It is a fact that you may have a running nose, or swollen spots on your skin, or that you may struggle for breath, all from the same cause. To put this fact in other words, we might say that hay fever, asthma, and hives and other skin disorders are related to one another in that they all represent a reaction which is known as allergy.

The pollen of some grasses will cause hay fever; a strawberry may bring out a crop of hives and a feather pillow be responsible for an asthmatic attack, all because some people have a peculiar sensitiveness to certain substances which have no effect upon the vast majority of persons.

When called upon to deal with such cases, the doctor assumes the role of a detective, with the hope of discovering the particular substance or substances to which his patient is sensitive. To assist him in this, he will use certain tests.

These tests consist of rubbing into a light scratch on the arm an extract of the suspected substance. If a number of substances are under suspicion, then a series of scratches are made, one for each substance. At the point which has been rubbed with the substance to which the person is sensitive, a wheal will appear.

In practice, it is not always as simple as this because the person is, as a rule, sensitive to many different substances, and there are so many to which he may be sensitive, that it is not easy, in many cases, for the doctor to find the culprit.

Knowing the responsible substance it may be possible to avoid it when it is an article of food, a feather pillow, or something from a house. If, however, it is something like milk or eggs it is difficult to eliminate these from the diet, and again, if pollens are responsible, necessity may keep a hay fever victim working in a district where these abound.

Fortunately, something may be done to overcome this sensitization. Through a series of injections, in proper doses, the person who is sensitive to pollens may be desensitized. Provided the responsible pollens have been recognized. Tolerance to foods may be built up by gradually increasing from the most minute amounts such as one single drop of milk for example.

The real purpose of this article is to bring to the attention of our readers a manner in which the cases are properly dealt with by discovering and removing the cause. Obviously, it is a waste of time and money to take measures to overcome a condition that is due to allergy or sensitiveness.

Quotations concerning Health, addressed to The Canadian Medical Association, 124 College Street, Toronto, will be answered personally by letter.

VALUE OF RAYON HOG IMPROVEMENT

W. A. Wilson, animal products trade commissioner for Canada in Great Britain, visited Alberta last week when he took occasion to emphasize once again the importance of persistent work in improving the quality of hogs for bacon supplies for the Old Country market, in line with the intensive campaign conducted jointly by the federal and provincial agricultural authorities during the past six months among the farmers of the province for the improvement of quality in hog production.

FIRE IN ALBERTA

Thirty deaths from fires was the casualty list for Alberta in 1933, according to the report of P. C. Commissioner Henry Brace compared with only nine last year. There were 1,323 fires during the year in all parts of the province, and property loss aggregated \$14,535,015, as compared with \$8,495,450 from 1,932 fires in 1932, a reduction in losses for the second year in succession. The 1933 loss was the lowest fire damage on record for the past 14 years. While the number of fires was only slightly less than before, the report points out that the fires that did occur did not assume the proportions or cause the destruction that was the case in former years. Right out of every ten fires are declared to have been due to carelessness in the handling of fires, or neglect in removing fire hazards.

Plapper (looking nervously at small boy with dog): "Don't let him bite you, he's showing his teeth." Small Boy: "Oh, you can't go by that, mias; you're showing your legs but I don't suppose you'll kick."

HOUSEHOLD HINTS

To achieve that delicious white and glossy appearance of fried eggs fry them in a piping hot skillet with a light cover over it.

When you are making gelatin, use a pitcher to mix the powder and water; then when the ingredients are ready to put into the mold you'll find it simpler to pour.

If your bread shows signs of mold, hold the sides of the bread over a gas flame for a minute. The heat will kill the mold spores without bringing out the bread to any appreciable extent.

You can keep parsley fresh by putting the stems in a glass of water to which you've added a slice of lemon or a teaspoon of vinegar.

Put your mixing bowl on a folded towel when you are beating ingredients with one hand and adding material with the other. The bowl won't slip on the towel as it does on a smooth table surface.

Your eggs will look like new if you scrub them with a stiff brush moistened in diluted ammonia and rinse them off with a garden hose when hatching on the clothes line.

The next time one of the children has a birthday, decorate the cake using alphabet macaroni colored with vegetable dyes to spell out the child's name.

Don't throw away your orange peel. Soak and dry it and grind it into a coarse powder. Use it to flavor cake, sauces and puddings. You can do the same thing with lemon peels.

When you're frosting a layer cake if the upper layer shifts after placing it on the lower, use four toothpicks to keep it in place till the frosting has set.

VERY LATEST

Designed in Sizes 36, 38, 40, 42, 44, 46, 48, 50 and 52. Size 44 requires 1 1/2 yards of 19 inch material with 1/2 yard contrasting.

A Daytime Frock

Pattern 8203. For general all-around usefulness, choose the becoming and slenderizing design pictured here. The rippling jabot collar adds to the appearance of length as do also the side panels of the skirt and the flaring sleeves and underdrift.

A printed dark blue voile is suggested for this frock, combined with a white chiffon collar and vestee. It is printed silk, either in black and white or with light background and colored design combined with white for contrasting would make up attractively. It could also be made of dark blue sheer with only a white vestee.

HIG INCREASE IN TOURIST EXQUISITES

Increases of nearly 100 per cent in enquiries from prospective tourists is reported by the provincial publicity bureau, which has been concentrating on tourist publicity for the past three seasons. The bureau is in contact with over 300 agencies throughout the continent, to all of which supplies of the new provincial tourist literature and highway guides have been sent. A number of these bureaus report very large increases this season in tourist bookings and in interest shown in Alberta's attractions.

WHEAT

Canadian Premier Comments on Wheat Pool

In his speech in the House of Commons delivered on June 7th on the Marketing Bill, Hon. R. B. Bennett, premier of Canada, made the following statement about the Wheat Pool movement: "I will think that no Wheat Pool has been operated more reasonably than the Pool in Alberta. Pools were formed also in Saskatchewan and Manitoba. It will may be that when, without adequate experience, they endeavored to project their idea into the world market without, as I say, having a full understanding of what was involved, they met with a measure of disaster, but that does not in any sense militate against the soundness of what they were endeavoring to do. They were opposed by the great interests; they were opposed by many others, but they maintained their position, and I heard the foremost banker of that time in Canada say that it had done more to enable the western farmer to care for his obligations and deal with his economic life in an orderly manner than any other single thing to which reference could be made."

Wheat Carryover in France

The government estimate of the prospective wheat carryover in France is 132 million bushels. The official estimates are as high as 275 million bushels. It is difficult to know the approximate value of such stock, since they are kept a close secret and it is hard to arrive at the value in the hands of the wheat growers. The government has some plans to furnish a credit of 441 million dollars to finance the carryover.

Howard Wheat

Howard wheat is being grown to take the place of garnet in localities where early ripening is an important requisite and where there is a possibility of growers forsaking garnet wheat when the new regulations of separate grading of that variety come into effect in 1935.

Dr. Newman, Hamilton, Ontario, says that Howard wheat is the only wheat available today that will retain its high quality to any marked degree in the north country. His department has large quantities of Howard wheat seed all over the west, available to growers. Dr. Newman said that yields at Beaveridge, Port Vention, Lacanoe and Scott show that there is little difference in yield as between garnet and Howard. At Scott the yield is only 2 bushels in favor of garnet; at Port Vention, 3 bushels and at Beaveridge, 5 bushels and at Lacanoe, garnet out-yielded Howard by about 8 bushels.

New wheats are being developed by the department, according to Dr. Newman, and one or two of these varieties will likely supplant Howard and garnet. In fact Dr. Newman thinks both Howard and garnet will pass into history.

Howard wheat is stronger in the straw than garnet and has been found more suitable for rolling countries because the crop can be left standing in the elevators when it ripens earlier, until the crop in the depression ripens, without any fear of shattering. It is not the case with regard to garnet which shatters very easily.

To obtain a good yield of garnet

about the soil must be properly cultivated and kept clean and seedling should be at least 2 bushels to the acre.

Australian Wheat Prices

Wheat growers in Australia, according to the Canadian Trade Commission at Melbourne, have been receiving for Canadian money 10 1/2 bushels for their wheat at contract prices and 5 1/2 bushels (Canadian) at the auction at Melbourne. There has been a lot of holding for higher prices on the part of farmers.

The Effect of Future

Discussing the possible breakdown of the International Wheat Agreement through Argentina's action, W. Peterson, publisher of The Farmer and Ranch Review says:

If such should unhappily be the case, the only feasible plan to quickly secure living wheat prices will fall all over an unenviable period. The farmer will survive. He always does. The depression will, however, continue until bread grain is no longer available. That is an economic disaster in Canada, in the mean while, will have to go out and merchandise their wheat competitively on the barley market. Eastern countries may have to bear a heavy reduction in tariff and the grain trade may face revolutionary changes. One thing is certain, with the very low prices, our wheat must be sold or Canada will invite business chaos. That will not be permitted to happen, even at the cost of

complete control of marketing when it would down to be the only recourse way out."

Conditions in Russia

Tremendous efforts were made by the International Wheat Agreement during the current season. While the objective set were not attained, still better progress was made than last year. By May 16, 1934, 146,514,000 acres were sown to grain, while at that date in 1933 the average sown was 146,012,000.

The co-operation of the United States Department of Agriculture

mentions that sowings on Russia state farms lagged this year even behind the sowings of individual farmers. The state farms were sown largely by tractors. The biggest trouble the Russians had, however, was dry weather in the most important wheat-raising districts. Some alarmist statements have emanated from Russia as to the possibility of a very serious crop failure. This is discounted by Russian officials in Europe. Even in the light of these statements it must be assumed as a fact that quite serious damage has resulted from drought. British experts believe that Russia will have to rely to any extent in the international wheat trade during the coming year. They think the crop will be considerably smaller than last year, from which less than 30 million bushels was reported and that every bushel will be required for home consumption.

"As pure as . . . BEER!"

Many people may be surprised at this unexpected comparison: "As pure as . . . BEER." Yet it is a simple fact that there is no article of food or drink produced with greater care and in greater purity, than the beer of today.

Obtainable at our Warehouses, Vendor's Stores and your LOCAL HOTEL.
